Customer Reviews
As others have noted, this is a useful book for generating ideas and getting the creative juices flowing. I bought it to obtain those features, and it did not disappoint me.The Stiles are, apparently, a prolific couple on this and similar topics, and they certainly deserve credit for effective packaging and marketing. David Stiles has filled the book's pages with material--some good, some irrelevant, and some good for entertainment--but he certainly has filled it nonetheless. The layout and tone of
this book is vaguely reminiscent of a copy of an early 1970s Mother Earth News. The reader’s challenge is to extract the kernals of insight from the volumes of chaff. What the book lacks in detailed engineering and construction discussion and techniques it makes up for in peripheral and, in some cases, funny advice. Consider the detailed description of the electronic vehicle-arrival and gate-unlocking monitors--this in a book purported to find ways to get one in touch with mother nature and perhaps forego electricity entirely. Or the sketch plan for the garden-hose remedy against racoons infiltrating your metal trashcan. The advice is intriguing enough, but one suspects that a bit more discussion on well-installation or obtaining running water might be in order before turning to a technological solution involving the use of pressurized water for a racoon problem. Given the Stiles’ ties to Manhattan, maybe the accepted security measures of their current environment don’t seem quite as ridiculous or irrelevant as they probably do to anyone who actually lives in a rural area. Or consider their admonition against Coleman lanterns being "Scary and hard to light.
