Habitat For Humanity How To Build A House Revised & Updated(Habitat For Humanity)

Synopsis

Since its founding in 1976, the non-profit Habitat for Humanity International has built more than 255,000 houses for more than one million people and families in need world wide. First published in 2002, "Habitat for Humanity How to Build a House" has helped thousands more build simple, energy-efficient homes of their own by helping guide them from foundation to roof, through all interior finishes and fixtures. Written by long-time carpenter and Habitat volunteer, Larry Haun, this extensive revision features up-to-date information on residential codes, construction methods, and materials -- as well as an updated design inside and out. Haun also provides new sections on tools, siding, ventilation, and landscaping. With Clear information on everything from obtaining a site and permit to finishing touches like installing door locks and cabinets, this is the best single-volume resource for the beginning homebuilder.

Book Information

Paperback: 282 pages

Publisher: Taunton Press; Revised, Updated ed. edition (September 9, 2008)

Language: English

ISBN-10: 1561589675

ISBN-13: 978-1561589678

Product Dimensions: 9 x 0.6 x 10.9 inches

Average Customer Review: 4.4 out of 5 stars [See all reviews](#) (63 customer reviews)

Best Sellers Rank: #71,045 in Books (See Top 100 in Books) #19 in [Books > Crafts, Hobbies & Home > Home Improvement & Design > How-to & Home Improvements > House Plans](#) #48 in [Books > Politics & Social Sciences > Social Sciences > Philanthropy & Charity](#) #52 in [Books > Arts & Photography > Architecture > Buildings > Residential](#)

Customer Reviews

This is easily the best book I've read on this subject. Written by a carpenter with many decades of practical home building experience to share, and profusely illustrated with hundreds of high resolution color photographs, the book is an absolute goldmine of practical information. What I particularly enjoyed was the clarification of carpenters terms - I had always thought that a keel was part of a boat; I now know that the term is also used to refer to a carpenters crayon. The same clarification takes place in hundreds of areas throughout the book, and never in a condescending manner. Cripples, studs, shims, faceplates, heels... all are explained, clearly and intelligently. Also

included are innumerable time saving tips, examples of small jigs and tools you can build for yourself that will save you time and effort, and instructions on how to do simple things like check a foundation for squareness, or use a water level properly. The book is also a wonderful ambassador for Habitat for Humanity. What better way to develop your homebuilding skills, than to volunteer your time helping someone to realize their dreams? They get a home; you get an education; everyone wins. About the only things I would add to this book would be a couple of pages of sample blueprints to better illustrate the Habitat for Humanity concept of small, sensible homes. (Habitat for Humanity apparently has a wide variety of plans available, but they are not in this book.) I would also have liked a chapter on landscaping; but to be fair, landscaping really does fall beyond the scope of the book. The general philosophy of the book is to build a sensible home, rather than an ostentatious one; to make it warm, comfortable and functional, rather than glitzy and faddy.
